Tools needed:

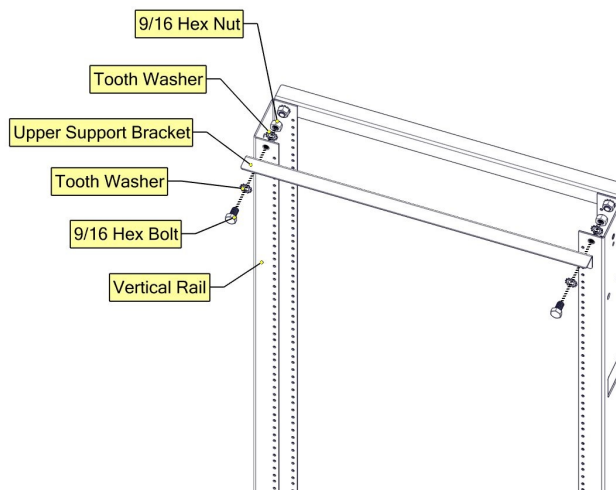

What's in the box:

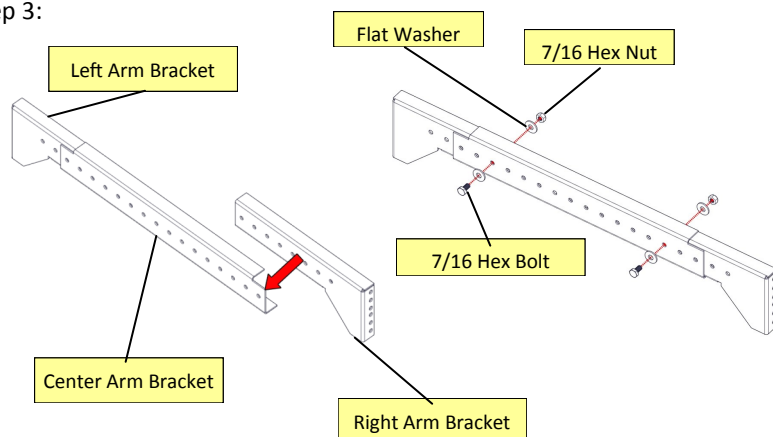

Step 1 : Assemble the L Bracket Bases to the Vertical Rails as shown below. Do this for all four Rails and L Bracket Bases.

Step 2 : Assemble the Upper Support Brackets to the top of the Vertical Rails as shown below. Do this for all four Rails and Upper Support Brackets.

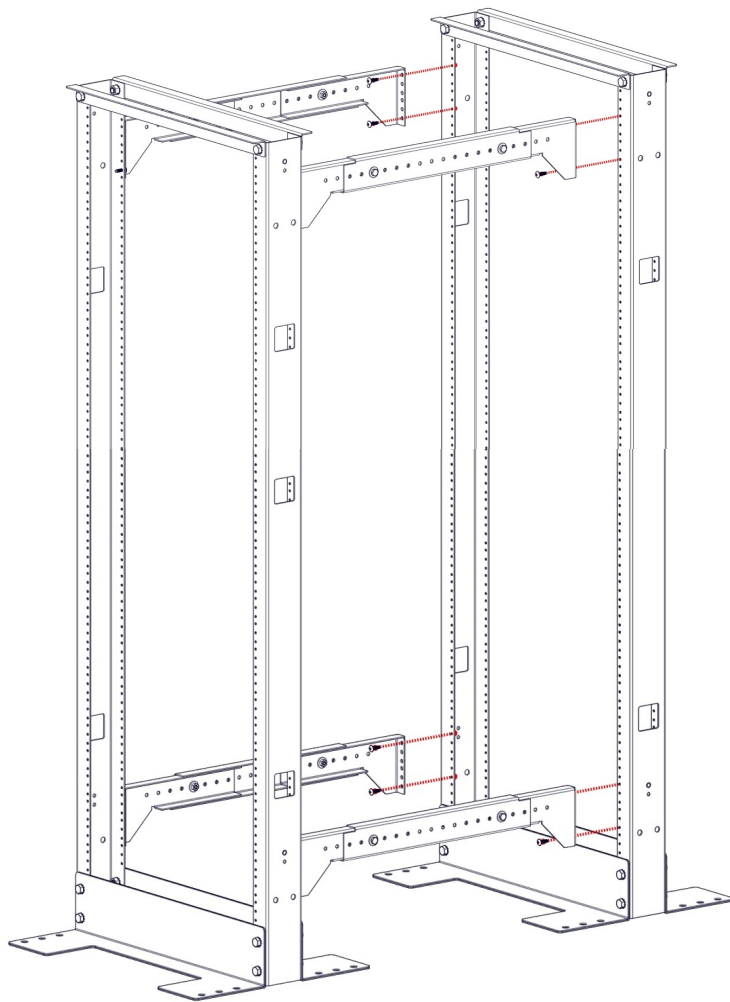

Step 3:

Insert the Left and Right Arm Brackets into the Center Arm Bracket as shown and secure with included 7/16 hardware. Make sure you set them for your desired depth. Follow this step for each of the arm assemblies.

* Note - Be sure the Center Arm is centered so the weight is evenly distributed.

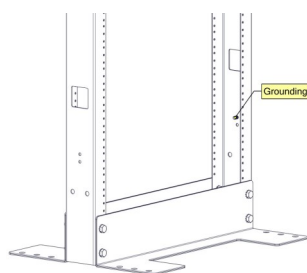

Step 4:

Mount one arm at a time to each side using the included 10-32 Rack Screws. Place the arm assemblies at the upper corners and lower corners. The more screws that you use to mount the arms, the stronger the overall rack will be. Each arm allows for six screws per side. To maintain the published weight capacity, six screws are required.

To adjust the racks depth:

Take out the 7/16 hardware in the arm assemblies and slide the two sides together or apart and reinstall hardware in the arm assemblies.

Grounding Studs: Note that there are 1/4-20 Grounding Studs on the top and bottom of each Vertical Rail. See placement below.

Bottom Location

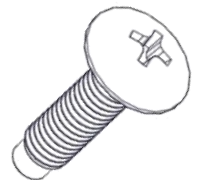

Top Location

Rack Screws:

For your convenience, fifty 10-32 rack screws have been provided to install rackmount equipment into your new relay rack. If you should need additional hardware please contact us, or an authorized reseller, today.
