- The diagram illustrates the Fortinet SD-WAN architecture. At the center is a **FortiGate NGFW IPS** (Next-Generation Firewall/Intrusion Prevention System). This central device is connected to several other components:
- FortiClient VPN Client**: A laptop icon connected to the Internet cloud, which in turn connects to the FortiGate.
 - Internet**: Represented by a cloud icon connected to the FortiGate.
 - FortiGate Segmentation**: A switch-like device connected to the FortiGate, which then connects to a **Data Center** (represented by server racks).
 - FortiManager Single Pane-of-Glass Management**: A management console connected to the FortiGate, which also manages the FortiGate Segmentation and FortiAnalyzer.
 - FortiAnalyzer Analytics-powered Security & Log Management**: A device connected to the FortiManager, which collects logs and provides analytics.
 - Data Center**: A large server rack icon connected to the FortiGate Segmentation.
- The entire system is shown within a large light blue circle, representing the SD-WAN network environment.

Hardware Features

Powered by SPU

- Fortinet's custom SPU processors deliver the power you need to detect malicious content at multi-Gigabit speeds
- Other security technologies cannot protect against today's wide range of content- and connection-based threats because they rely on general-purpose CPUs, causing a dangerous performance gap
- SPU processors provide the performance needed to block emerging threats, meet rigorous third-party certifications, and ensure that your network security solution does not become a network bottleneck

Network Processor

Fortinet's new, breakthrough SPU NP6 network processor works inline with FortiOS functions delivering:

- Superior firewall performance for IPv4/IPv6, SCTP and multicast traffic with ultra-low latency
- VPN, CAPWAP and IP tunnel acceleration
- Anomaly-based intrusion prevention, checksum offload, and packet defragmentation
- Traffic shaping and priority queuing

Content Processor

Fortinet's ninth generation custom SPU CP9 content processor works outside of the direct flow of traffic and accelerates the inspection.

High-Speed Connectivity

High-speed connectivity is essential for network security segmentation at the core of data networks. The FortiGate 2200E series provides 40 GE and 25 GE interfaces, simplifying network designs without relying on additional devices to bridge desired connectivity.
